POSITION: DevOps Engineer (Ref: DOEMF1)

This is an urgent requirement for an US organization to be based in Chennai. They are one of the popular Healthcare organization in US. You will be on a payroll of their Indian associate and report directly to US management. Though the India office is in Chennai, Tamil Nadu, other state candidates are encouraged to apply since most of the time it will be 'Work From Home' situation.

Experience	6 Years (+/- 2)
Salary	Much higher than current CTC
Timeframe	Will be finalized ASAP
Working Time	1:30 PM to 11:00PM

What you will work on

You will oversee development, test, UAT, and production environments for our products. Key aspects of this role include automation, configuration management and tools development while collaborating with the engineering team on projects/products as expert on reliability, performance and efficiency.

- Deploy, automate, maintain, and manage systems ensuring high availability, performance and scalability
- Design and implement cloud solutions to support continuous delivery and continuous integration processes
- Periodically assess all monitoring requirements and implement necessary enhancements to meet changing/growing business needs
- Work with senior leaders to developer complex, enterprise-level initiatives that are part of company's overall strategic direction
- Tune and troubleshoot full-stack software applications using OOPS, Java, web-services, Oracle DB, Mongo DB, networks concepts and virtualization techniques (Kubernetes)
- Proactively review, recommend and implement changes to the live infrastructure after ensuring the right validation has been carried out
- Provide scripted solutions to special projects

Requirement:

- 6+ years of experience working in software development.
- Experience with building **CI / CD** (multi branch pipeline - must)
- Must have experience with **Ansible**.
- Must have experience with - **Kubernetes** deployments, configuration maps and secrets - networking services and ingress controllers (AWS specific)
- Experience with **Jenkins installation** and configuration including creation and maintenance of jobs
- Experience working with **Docker** containers: building, maintaining, debugging
- Familiarity with technology tools such as **ELK, Confluence, JIRA and Jenkins**

Other Requirement & knowledge:

- Self-motivated and technically curious
- Ability to work independently and prioritize competing priorities
- Logical Thinking

If you are interested, please send your updated resume with current and expected CTC or call me.

Regards,
Subhashini G
